## A sturdy temporary fence for maximum safety on your project

### A temporary fence with a strong frame

This Heras temporary fence is the perfect choice for everyone looking for a sturdy and reliable temporary fence. Thanks to the fully welded frame and the extra reinforced, welded corners (corner brackets), this temporary fence has a longer lifespan than other temporary fences. This makes it suitable for construction sites, events, infrastructure projects and other temporary sites.

- Suitable for attaching tarpaulins
- Protection against unauthorised persons thanks to narrow mesh size
- Ideal for long-term use

### Maximum safety at your temporary site

Every temporary fence consists of a frame containing a mesh. The mesh of the M500 temporary fence differs from our other temporary fences in having a narrow mesh size (40 mm). This makes it more difficult for unauthorised persons to climb over the fence. Due to the narrow mesh size, it is not easy to place your foot in the mesh of this temporary fence. This not only provides additional protection against intruders, but also reduces the risk of accidents. Thus, safety is paramount on your site.

### A temporary fence that is easy to move and install

The pre-galvanised material with no sharp edges ensures that the M500 temporary fence is safe and easy to install or (re)move. Are you looking for another temporary fence? Besides this version of the M500 temporary fence with corner brackets, we also have a M500 temporary fence with corner brackets and a vertical central tube. Naturally, we also have other temporary fences in our range. It is also possible to customise our temporary fences with a personalised nameplate. Please contact our employees. They will be happy to help you.
