Strong, stable and safe – the ideal temporary fence for your site

A robust temporary fence for long-term use

This Heras temporary fence is stronger thanks to the welded corner brackets and the extra vertical central tube. The extra reinforcements make the temporary fence more resistant to wind and other weather conditions. This makes this fence a good choice for construction sites, events and other projects where a sturdy and reliable temporary fence is required.

- Extra protection against intruders
- Suitable for attaching tarpaulins
- A safe choice for any project

A narrow-mesh temporary fence for extra security

A key feature of this Heras temporary fence is its narrow mesh size. But what does that mean exactly? The mesh size is the distance between two vertical steel wires. The smaller this distance, the more difficult it becomes to get a grip on the temporary fence. This M500 temporary fence from Heras Mobile prevents people from easily climbing over this fence. This limits unwanted access to your site.

A practical and reliable solution

This temporary fence is strong, which makes it suitable for long-term use. This makes this temporary fence an effective barrier for various situations. Whether it is a construction site, event or other temporary project, with this fence you are assured of a practical and reliable solution. Did you already know that you can add a personalised nameplate to this temporary fence? Contact our employees for more information or order this temporary fence directly.
