Temporary fence with a strong frame for repeated use

Temporary fence with an extra-reinforced frame

Are you looking for temporary fencing that is strong and user-friendly? The Heras M400 construction site fence is designed for intensive use on building sites, event venues or other temporary locations. The welded corners (corner brackets) and horizontal central tube make the frame extra strong. This robust construction significantly extends the lifespan and makes the fence resistant to repeated placing, moving and transporting. A stable and reliable choice!

- Excellent value for money
- Personalised sign on the fence is possible
- Quick to install or move

Safe to use, even with tarpaulins

Thanks to its stable frame, this fence is suitable for mounting tarpaulins. This allows you to advertise the project or your company efficiently. In addition, the M400 mobile fence is pre-galvanised, which means that there are no sharp zinc remnants on the fence. This allows you to (re)erect the fence safely without hurting your hands. When installed by one person, we recommend using the Heras Fence Lifting Tool. This limits the physical load when lifting the fence.

Looking for another temporary fence?

Are you looking for another Heras mobile fence? Besides this version, we have other variants of the M400 fence in our range. Ordering another type of temporary fence is also possible. Depending on your requirements, we have a suitable fencing solution available for you. Do you need advice? Our team will be happy to help you.
