A reliable and sturdy temporary fence for any situation

Extra strong thanks to corner reinforcement and vertical central tube

This temporary fence is designed for maximum stability and rigidity. The corners of the fence have strong welded-in corner pieces (corner reinforcement), which prevents wear and tear and extends the lifespan of the fence. The vertical central tube reinforces the frame and reduces torsion (twisting), making the mobile fence resistant to load and weather conditions. This makes this M400 temporary fence suitable for construction sites, events and other temporary projects where a sturdy and stable construction site fence is important.

- Long lifespan
- Fully welded frame
- Professional appearance

More visibility with a tarpaulin and personalised fence sign

Thanks to its sturdiness and stability, you can attach tarpaulins to the temporary fences. In this way, you block the view and it is more difficult for passers-by to see what is happening on your site. This is a perfect solution when privacy is important. In addition, tarpaulins are a good way to advertise your project or company. Combined with a personalised fence sign, they allow you to promote your company.

Other versions are also available

The M400 mobile fence is available in different versions. In addition to corner reinforcement and vertical central tube, you can choose a temporary fence with a horizontal central tube and/or hook-and-eye connection. A horizontal central tube also ensures a sturdier temporary fence, while a hook-and-eye system allows for quick assembly. Do you have specific requirements?
