## A temporary fence with corner brackets, ideal for the longer term

### A basic temporary fence for long-term use

This M400 construction site fence is a strong fence thanks to the welded-in corner pieces (corner brackets). These reinforced corners make the fence extra stable and sturdy, making it resistant to wear and tear and weather conditions. This makes the temporary fence suitable for use on long-term projects. Moreover, the pre-galvanised material ensures that there are no sharp zinc edges, increasing safety during assembly. The temporary fence can be easily assembled by one person, especially with the help of the Heras Fence Lifting Tool.

- Suitable for attaching tarpaulins
- Includes corner reinforcement
- Ideal for long-term projects

### Suitable for tarpaulins thanks to sturdy construction

The temporary fence has a solid construction and the frame is 100% welded all around, which contributes to the sturdiness of the fence. The corner reinforcement makes the temporary fencing sturdier, allowing you to attach tarpaulins to the fences. Combined with a personalised sign, you can easily promote your project or company.

### An M400 mobile fence available in several variants

Besides this standard version with corner reinforcement, you can also choose the combination with a vertical central tube or hook-and-eye system. A vertical central tube is a handy option if you want an even more solid construction fence. To connect the fences easily, we recommend temporary fences with a hook-and-eye connection.
