A temporary fence that completes the fence line

Compact and functional: the M300 fitting element

The M300 fitting panel is a pre-galvanised construction site fence of approximately 2 metres wide that is suitable to complement your fence line. Its compact size makes it ideal for making the temporary fence line fit, regardless of which type of fence you use. In addition, this fence is suitable when you are dealing with smaller trucks. Thanks to its light weight and smaller size, the temporary fences can be easily bundled and transported.

- Transport-friendly
- Easy to install by one person
- Perfect addition for any situation

Easy to install and safe to use

The fitting panel M300 is designed with ease of use in mind. The mobile fence contains no sharp zinc residue, making it safe to handle. One person can install the fence quickly and without much effort. For extra support and less physical strain, we recommend using the Heras Fence Lifting Tool. If required, our construction site fences can be fitted with a personalised sign. This makes the temporary fence not only functional, but also an effective means of communication on your construction site.

Multiple options for every situation

In addition to this narrower version, other construction site fences are also available from Heras Mobile. For example, we offer standard temporary fences of 2 metres high and 3.5 metres wide. As extra options, you can choose, for example, welded-in corners (corner brackets), a hook-and-eye connection or a horizontal or vertical central tube. There is always a temporary fence available to suit your needs and situation. Our team is ready to think along with you.
