The reliable classic among temporary fences

A temporary fence with a longer lifespan

The mobile fence M90 is a fixture within any project. Thanks to the robust frame, the post-galvanised material and the steel mesh welded by hand onto the frame, this fence can withstand intensive use. The name M90 refers to the introduction year 1990 of this temporary fence - and since then, this fence has been known as a reliable classic that proves its quality time and again. The construction site fence is therefore suitable for those looking for a sturdy solution with a long lifespan.

- Longer lifespan due to post-galvanised material
- Suitable for use on several projects
- Ideal for securing tarpaulins

Extra protection thanks to post-galvanised material

The M90 temporary fence differs from our other fences by its post-galvanised material. This means that the untreated material is first manually welded into a fence. After that, the mobile fence is coated with a zinc layer. This zinc layer is thicker than for pre-galvanised fences and also optimally protects the welds against rust and wear and tear. This makes our M90 mobile fences suitable for long-term use, even in extreme weather conditions or at the coast.

Ready for your project and requirements

The M90 mobile fence is a versatile fence. For example, it is ideal for mounting tarpaulins - perfect for fencing off a construction project or event and advertising at the same time. Do you want even more stability? Then this temporary fence is also available with a vertical central tube, possibly combined with welded-in corners (corner brackets). Whatever version you choose, you will always order a fence that fits your situation. Contact us and we will be happy to help.
