The reliable classic with centre tube for extra sturdiness

The M90 mobile fence with vertical central tube

The M90 temporary fence with vertical central tube is the perfect choice for those looking for a stable fencing solution. This construction site fence is characterised by the steel mesh that is welded to the frame by hand. Of course, the vertical central tube is also an important feature. This provides more stability and rigidity, making the fence suitable for intensive use. So, the extra centre tube is a smart addition that makes this fence suitable for any construction site, event or other temporary site. Since its introduction in 1990, this model has therefore been a robust classic within the Heras Mobile range.

- Longer lifespan due to post-galvanised material
- Suitable for attaching tarpaulins
- A good choice for any temporary project

Long-lasting protection thanks to the post-galvanised material

Like all fences in the M90 product line, this model is fully post-galvanised. First, the untreated material is welded by hand to produce a temporary fence, including the attachment of the additional centre tube. This is followed by a zinc treatment. This creates a thicker zinc layer that also optimally protects the welds from rust. This approach significantly extends the lifespan of a construction site fence. As a result, the M90 mobile fence is a sustainable long-term investment.

Suitable for attaching tarpaulins

Thanks to its sturdy construction, this temporary fence is ideal for attaching tarpaulins - ideal for privacy or project communication. This is because it is more difficult for passers-by to see what is going on at the construction site or event venue when you use tarpaulins. At the same time, you can choose to print the banners with, for example, information about the project or your company. Do you want to know more? Our employees are at your service.
