### An extra-high temporary fence for maximum safety

#### Ideal for locations requiring maximum security

For locations where the fencing line must have no weak spots, the Heras M550 mobile fence offers the solution. With an impressive height of 2.45 metres, this fence provides a serious barrier against unauthorised persons. The height deters and increases security in high-risk locations such as airports or distribution centres. For extra protection, the temporary fence can be fitted with barbed wire, creating a total height of around 3 metres.

- Additional protection thanks to narrow mesh width
- Including horizontal central tube
- Higher than our standard 2-metre fences

#### Stability and protection against intruders in one design

Another key feature of the M550 temporary fence is its narrow mesh size (35 mm). But what does this mean? Mesh size is the distance between two vertical steel wires. The smaller this distance, the more difficult it is to climb over the fence. Moreover, this construction site fence is equipped with a horizontal central tube as standard. An extra tube across the entire width provides extra strength. When installing, make sure the centre tube is on the inside of the site for optimum safety and effectiveness.

#### A temporary fence that lasts for a long time

Finally, the M550 mobile fence is fully manually welded and post-galvanised. This means that we first weld the untreated materials into a temporary fence. After that, the fences are coated with zinc, making them more resistant to wear and tear and weathering. The lifespan of post-galvanised fences is therefore considerably longer.
