The ideal temporary fence to guide people and traffic

Sturdy temporary fence suitable for various situations

In situations where you want to guide people or traffic, we recommend using our low temporary fences. One of the options is our mobile fence M100 with corner brackets and hook & eye. Thanks to the height of this temporary fence (1.2 m), you can easily create a visible and safe barrier. The corner brackets make this temporary fence more solid, allowing you to use this fence for various purposes. For example, you can use them to separate cycle paths and footpaths from other traffic or apply them as fall protection.

- Multi-purpose
- Simple locking by hook and eye system
- Including corner brackets

Multi-purpose temporary fence with corner brackets

The low temporary fences (including corner brackets) are designed to separate people and traffic. By installing the 1.2 m high fence in a steel base plate, you not only create a solid construction, but also reduce the tripping hazard for pedestrians. These base plates are placed loose or anchored to paving or concrete with expansion bolts. Do you prefer using blocks? No problem. Use the holes as far as possible on the outside of the block.

Creating an extra-high temporary fence

The low temporary fence is also suitable for installation on a 2-metre high temporary fence using a special attachment. This creates a total height of 3.2 metres. 2 or 3 rows of barbed wire can be placed on top of that. In this way, you create extra height and extra safety!
