A galvanised city fence to restrict the view

Complete enclosure with a galvanised city fence

The galvanised city fence from Heras Mobile offers an effective and durable solution for fully screening off construction sites or other temporary sites. The fence frames are filled with a sheet piling profile coated with a thin layer of zinc. This galvanisation protects the steel against corrosion and extends the fence's lifespan, even with intensive use and exposure to various weather conditions.

- A tidier and safer street scene
- Enhanced safety
- Completely obscured the view

A tidy street scene and maximum safety

The city fence ensures a calm and tidy street scene around the site. The solid panels prevent disturbances and contribute to a professional appearance for the project. At the same time, the fence enhances safety on and around the site. As the view is completely obscured, work remains out of sight of passers-by. This minimises distractions and reduces the risk of unsafe situations.

Strong and functional temporary fencing

The galvanised construction makes the city fence strong and durable. The zinc coating protects against rust, meaning the fence requires little maintenance and remains in top condition for a long time. In addition, the sheet pile profile is designed in such a way that it offers no grip for bicycles or advertising hoardings. This keeps the fence neat and functional. With the galvanised city fence, you are therefore choosing a low-maintenance and robust solution that contributes to both the safety and appearance of any temporary site. Do you want to know more?
