The lightweight temporary fence that lasts a long time

The mobile fence M70: lightweight yet strong

Heras Mobile's M70 temporary fence is a good choice for those looking for a light but sturdy fence. Thanks to the efficient use of materials, the fence is lighter than our other post-galvanised variants, without compromising on quality. It therefore offers excellent value for money. The hook-and-eye connection ensures quick and easy assembly.

- Lightweight temporary fence
- Extra-long lifespan thank to galvanisation
- Quick assembly with hook-and-eye system

Hook-and-eye system for fast assembly

A key advantage of the Heras mobile fence M70 is the integrated hook-and-eye connection. This clever addition allows fences to be easily hooked together without additional tools. This allows the fences to be quickly placed in a straight line. In addition, it is more difficult to lift the temporary fences out of the fence line.

Long-term protection thank to galvanisation

The M70 temporary fence is manually welded and then galvanised. This means that the fence is first produced entirely by hand using untreated materials. After that, the mobile fence is coated with a thick zinc layer. This method results in extra strong welds and a fence that is more resistant to rust. This allows you to use the M70 fence in various weather conditions and gives it a longer lifespan.
