A 1-metre city fence for safe traffic control

A sturdy and traffic-friendly fence

The Cityfence M850 is a 1-metre-high temporary fence specially designed for traffic control. The sturdy frame is fully padded with a steel sheet pile, which is why it is also known as a sheet pile fence. Thanks to its dense structure, the view of the work remains hidden from the eyes of motorists. Bicycles cannot be attached to the fence either. This makes the Cityfence M850 a practical and safe solution, especially when work is taking place along a road.

- Tidier streetscape
- Ideal traffic management
- Increased safety

A temporary fence that is functional and representative

The Cityfence M850 is not only a functional fence, but also contributes to a neat streetscape. Its clean design and closed panel make the temporary fence suitable for places where a neat and calm appearance is desired. This could be along a road, for example, to guide traffic in the right direction, but also on the construction site itself. In this way, you ensure a positive corporate image.

Alternatives for a neat appearance around the building site

Besides the 1-metre-high variant, we also have 2-metre-high versions available: fully closed or semi-open, where the lower half consists of a sheet piling. Those looking for a more durable or natural look can opt for a variant with wooden panels. These are also available as a 1-metre variant, half-open temporary fence and fully-closed fence. These are perfect solutions for projects in inner-city areas where a greener look is important.
