Visibility-restricting fence for inner-city projects

Representative temporary fencing for the inner city

The Combifence M825 is a partially visible temporary fence that provides peace and security around the construction site. The lower half is fitted with a blue sheet piling, which restricts visibility from the street. At the same time, pedestrians can follow the construction progress in peace. The combination of the sheet piling with the steel mesh provides a neat, professional appearance for the construction site.

- Suitable for inner-city building sites
- Increased safety
- Partial obstruction of vision

Increased safety thanks to narrower mesh size

What sets this mobile fence apart is the steel mesh with a narrower mesh width (35 mm) in the upper part of the fence. This makes it more difficult for thieves or curious persons to place their foot in the mesh and climb over the fence. The result? This combi fence is suitable for inner-city construction sites where safety and appearance must go hand in hand.

Other temporary fences also available

In addition to this combi fence, Heras Mobile also offers other city fences such as fences with a fully enclosed sheet-pile profile or 1-metre-high fences. Furthermore, we have more durable alternatives in the range. Think for example of the Combi-Wood and City-Wood fences that consist partly or entirely of wooden panels. Of course, we also have standard mobile fences available that consist of a completely open steel mesh. Whatever your requirements, we always have a suitable fencing solution.
