Lightweight crowd control barrier that is ideal for any event

Lightweight crush barrier for effective crowd control

The crush barrier M135 with 15 bars can be used when you want to escort large groups of people safely and in a controlled way. No matter what type of event, this crowd control barrier can be used. This is because the fence is lightweight and therefore easy to move and install. Thanks to the hook-and-eye connection, you quickly couple several barriers together, without tools or accessories. The size of the crush barrier - combined with the bar spacing of 113 mm - makes it extra safe for environments where children and animals are present.

- Handy crush barrier
- Quick to connect thanks to hook-and-eye system
- Ideal for events

What are crowd control barriers and what are they used for?

Crowd control barriers are fences used at small and large events to guide groups of people to the desired location. At events, it is important to keep people under control. Without crowd management, pleasant crowds can turn into chaos. Whether you want to mark a first aid location, guide walking routes or prevent queues, crowd barriers play a key role in the safety and experience of your event. By strategically placing the fences, you distribute the flow of people at logical points, preventing frustration and unwanted crowding. They can also be used when roads need to be (temporarily) closed off. A well-placed barrier thus ensures a calm atmosphere on sites and contributes to safety.

Considering purchasing crush barriers? Ease of use is important

In addition to safety, ease of use is also important. A transport rack is available for these M135 crowd control barriers. This allows for the transport and storage of up to 48 barriers. You can load and unload the crush barriers on both sides of the vehicle. Furthermore, the transport rack fits on a standard trailer.
