Crush barrier for optimal control and safety at events

Reliable fence for overview and safety

The crush barrier M135 with 16 bars is a smart choice for events or other temporary venues where safety and overview are essential. The 16 bars provide a smaller bar distance (113 mm), making the fence extra safe in environments where children are present. This distance makes it more difficult for a child to get its head between them, for example, which greatly reduces the risk of entrapment or injury.

- Compact and lightweight
- Safe bar distance for child-friendly situations
- Quickly and efficiently installed

Manoeuvring the flow of people with crowd barriers

When you organise an event, it is all about control and safety. With crowd control barriers, you create logical walking routes, avoid queues and keep the peace at busy areas such as entrances or first aid locations. Proper placement of a crush barrier also helps reduce unnecessary tension or aggression, ultimately contributing to a positive overall experience for your visitors, staff or participants.

Buying a crush barrier? Ease of use is a must

When you want to buy crowd control barriers, ease of use plays an important role. These lightweight barriers are therefore easy to install thanks to the hook-and-eye system. Thanks to this system, you effortlessly connect several crush barriers together without additional tools or accessories. The light weight also makes the crowd control barriers easy to position, move and store.
