The ideal crowd control barrier for any event

A crowd control barrier with safe bar spacing

The crush barrier M115 is a sturdy solution for safely guiding (large groups of) people at events, for example. Thanks to the hook connection, the barriers can easily be joined together without additional tools. The bar spacing of only 106 mm makes this fence child- and animal-friendly. Indeed, it is more difficult to crawl through the bars. This therefore makes the barriers suitable for events where safety is paramount. After use, you can easily store them.

- Safe bar distance of 106 mm
- Quick assembly with hook connection
- Multi-purpose

Using crowd control barriers in the right way

A crowd control barrier is a fence specially designed to guide crowds. The fences are often used at events, parades, demonstrations and road demarcations. They provide overview, clear dividing lines and an increased sense of security. Q crowd control barrier contributes to a safe and organised environment. By strategically placing fences, you avoid queues, frustration and unnecessary risks.

Facilitate the transport, storage, and deployment

A transport rack is available that is suitable for the M115 crowd control barriers. This allows 48 barriers to be transported, stored, and deployed. You can load and unload the crush barriers on both sides of the vehicle, allowing you to work quickly and efficiently. In addition, the transport rack fits perfectly on a standard trailer.
