Sturdy 1.2-metre-high temporary fence for safe demarcation

A safe and low Round Top mobile fence

This Round Top temporary fence is 1.2 metre high and the ideal solution for situations where safety is key. This low fence is suitable for separating cycle paths and footpaths from other traffic, but can also be used on the building site as fall protection, for example. The recognisable rounded top corners give the fence a friendly appearance, while the construction is reminiscent of both a mobile fence and a crowd control barrier.

- Versatile use
- Compact size
- Solid construction

A solid design for a functional fence

This low temporary fence is thus characterised by the rounded corners at the top. This prevents the frame from breaking at the top corners, as no welding seams are needed there. This keeps the fence longer intact and maintains its functionality. The bottom corners have welded-in corner pieces for more strength.

Various assembly methods for ease of use

There are various mounting methods available for our temporary fences. For example, installing this low fence in a steel base plate significantly reduces the risk of tripping for pedestrians. This makes it particularly suitable for busy environments. Do you prefer to use concrete or plastic footings anyway? In this case, we recommend using the outer holes of the block for maximum stability and safety.
