Robust concrete base for stable and secure temporary fence installation

Stable base for your temporary fencing

Looking for a solid foundation for your temporary fencing? This durable concrete block made of reinforced concrete is just what you need. It provides optimal support for your fencing. By default, the fences are placed in the centre of the block. Alternatively, you can place the fences in the outer holes, reducing the risk of tripping hazards for pedestrians. For even more stability on site, combine the base with stabilisers.

- Reinforced concrete
- A simple and reliable choice
- Perfect to combine with stabilisers

Durable design with smart features

Heras Mobile concrete footings are not only dependable but also cleverly designed. The square holes in each base make it easy to install anti-lift devices, enhancing security. This makes it harder for thieves or vandals to lift fencing panels out of the blocks. Would you like more information about our fence footings? Please get in touch with us.
