## Refillable ballast block for added fence stability

### Fillable plastic Step Block for maximum stability

The empty plastic ballast block is ideal if you want full control over the weight. Simply fill it with water or sand and place it over a fence footing. This way, you can increase the stability of your fencing whenever and wherever needed.

- Delivered empty, to be filled with water or sand
- Fits over both concrete and plastic fence footings
- Easy to transport, heavy-duty in use

### Practical for changing conditions

Because the block is only filled on-site, transport is lighter and more efficient. Once filled, it stands firm. A smart and sustainable solution for temporary fencing, access control or areas exposed to wind. This ballast block is ideal in situations where extra stability is essential, such as alongside busy roads, on open sites or at events. It prevents your fences from falling over. It is highly visible because of their vibrant yellow colour, there is a minimum trip hazard. Want to know more about our ballast elements? Feel free to contact us.
