Safe fence installation on guard rails with bracket support

For temporary fencing on roadside guard rails

The guard rail bracket is the ideal solution for mounting temporary fencing onto concrete guard rails. Commonly used during roadworks on motorways or provincial roads, it allows you to safely attach 1-metre-high fences to existing concrete barriers, offering added protection for both workers and road users.

- Quick installation on existing concrete guard rails
- Suitable for 1-metre-high fence panels
- Compatible with Fencenet and coupling clamps

Stable, safe and organised work along the road

Once the bracket is mounted, fence panels can be easily slid into place. We recommend connecting fences using clamps for extra stability. To reduce visibility into the work area and prevent debris from blowing onto the road, we also advise attaching a fencenet to the fence. A simple yet highly effective solution for safe and controlled roadside operations. Would you like more information about attaching fencing to road barriers? Please contact us.
