Space-saving alternative to fence blocks

Practical fencing without concrete blocks

This soilpin with sleeves is the ideal solution when there's not enough space for traditional fence blocks or when the ground is unpaved. The pin is driven directly into the soil, after which the temporary fencing is simply placed over the sleeves. This creates a stable setup without taking up extra space.

- Easy to install in soft or uneven surfaces
- No need for concrete or plastic fence blocks
- Stable and neat finish

Smart solution in limited spaces

By omitting the blocks, the site remains clear and accessible. Ideal for narrow pavements, along walls, or in high pedestrian traffic areas. This solution combines functionality and efficiency: quick to install, stable, and space-saving.
