Effectively block the view of your site

Temporary fencing is commonly used to secure construction sites. By attaching a tarpaulin to each fence panel, you can effectively block the view into the site. These tarpaulins match the size of standard fence panels, measuring 3.50 metres wide and 1.80 metres high. They come with eyelets along the reinforced edges, allowing you to easily attach them to fences with cable ties (not included). Our tarpaulins are available in a range of materials and colours to suit every project or situation.

- Clean and professional site appearance
- Effective visual barrier
- Fire-retardant tarp compliant with EN 13501-1 Class B

Fire-retardant solution for added safety

This NVO tarp is fire-retardant and plays a crucial role in safeguarding people on and around the site. The DIN 4102 B1 standard consists of two parts and is a strict fire safety norm adopted by fire services and event organisers across Europe. A B1 classification (DIN EN 13501) means the material is highly flame-resistant and meets the highest fire safety standards for temporary fencing applications.

Tips for reinforcing your fencing line

Attaching tarps to fencing increases wind load, so reinforcement is key. We recommend semi-permanent installation: place poles into the ground and fix the fences with fence clamps. If that's not feasible, stabilise the fence line using braces and blocks. Heras Mobile can take care of this for you. Note: not all fencing types are suitable for attaching tarpaulins, our experts are happy to advise you on the right solution.
