Wind-permeable screen that shields your construction site effectively

Functional wind-permeable mesh for visual shielding

Fencenet is a green, wind-permeable mesh that easily attaches to temporary fencing to shield certain areas of your construction site. It's perfect for situations where you want to limit visibility while also preventing dust, debris or other loose materials from being blown outside the site. With 55% blackout, this mesh is ideal for zones with high traffic or public access.

- Wind-permeable and visual shielding
- Suitable for 2-metre-high fences
- 50m roll covers approx. 14 fence panels

Safe solution for roadside construction

Fencenet is commonly used for roadworks, including along motorways. It prevents airborne debris from disturbing traffic and shields the work zone from visual distractions. Meanwhile, workers benefit from reduced wind and sunlight exposure. Thanks to its dense weave and reinforced hem with a large number of eyelets, the mesh is highly resistant to strong winds and sharp objects. Available as a 50m roll or as individual 3.5m wide sheets.
