Windscreen for dust reduction and visual shielding on your construction site

Effective shielding without full blackout

This green Fencenet is a wind-permeable fence screen that attaches easily to standard temporary fencing panels (3.5 m wide). It limits visibility into your construction site without fully obstructing airflow. The mesh provides 55% blackout while allowing ventilation. This reduces distraction and prevents dust or debris from blowing outside the perimeter. Thanks to its reinforced hem with brass eyelets, the mesh is quick to install using cable ties (not included).

- Wind-permeable with reduced wind load
- 55% visual blockage
- Highly resistant to wind and sharp objects

Popular solution for roadworks and construction projects

Fencenet is widely used during roadside works, especially along busy roads or motorways. It reduces distractions for traffic and shields workers from wind and direct sunlight. At the same time, it improves the visual appearance of the worksite. This version is compatible with 2-metre-high fencing and can be adapted for 1-metre-high fences placed on concrete barriers.
