## Extremely sharp Concertina razor wire for ultimate perimeter security

### For temporary barriers in high-risk areas

The Concertina of very sharp barbed razor wire is the ideal solution for securing sensitive or high-risk sites. This crossed version consists of double razor wires connected by clips, expanding accordion-style into a dense and highly effective barrier. The tighter the spacing, the more turns per metre and the more impenetrable the protection becomes. Commonly used around military facilities, industrial zones, and construction sites where maximum security is essential.

- Strong visual and physical deterrent
- Crossed version for increased density
- Suitable for high-risk and temporary applications

### Effective barrier and powerful deterrent

With its sharp blades and compact design, the concertina razor wire provides an extremely strong security barrier that keeps intruders out, both physically and psychologically.

Not suitable for use near animals. The intimidating appearance alone has a strong preventive effect.
