## Barbed wire head for deterring unwanted visitors

### Enhanced security for your fence line

The extension arm for barbed wire offers a simple and effective way to strengthen the security of your temporary fencing. The arm slides into the vertical post or can be attached using a Heras fence clip. Two or three strands of barbed wire can then be stretched across the top of the fence, adding up to 50 cm of extra height. This creates a strong deterrent against intruders and enhances overall perimeter protection.

- Adds up to 50 cm of additional height
- Fits posts with Ø42 mm diameter
- Simple and effective installation

### Strong visual and physical deterrent

With the extension arm, climbing over your fence becomes nearly impossible. Designed for temporary fencing with a minimum post diameter of 42 mm, this solution delivers both safety and a professional appearance. A cost-effective investment that provides immediate results in improving site security and deterrence.
