## Increase site safety with barbed wire

### Create a deterrent effect with the barbed wire extension for temporary fences

This end piece for barbed wire contains three attachment points that allow you to attach up to three rows of barbed wire above your temporary fencing. This creates more height as well as a preventative effect. This is because the barbed wire provides an excellent deterrent for people that would otherwise attempt to climb your temporary fencing to enter your property.

- Effective solution
- Additional security
- A safe site

### Suitable for various temporary fences

This end piece for barbed wire is specially designed for several types of temporary fences. The barbed wire extension can be easily attached to Square Top temporary fencing. The end piece slides into the vertical posts of the temporary fence (near the top tube). Please note that the end piece does not fit all temporary fences. You must take into account the diameter of the tube.
