Brace with integrated baseplate and welded-on sleeve

Strong and smart support solution

The Brace incl steel footing with integrated baseplate, ensuring faster and more secure installation. The strut is clamped between two fences and the baseplate can be anchored using a ground pin. If anchoring isn't possible, it can easily be weighed down using concrete or plastic feet as a counterweight.

- Quick and simple installation
- Suitable for anchoring or weighting
- Extra stability thanks to integrated base plate

Prevent tipping and extend fence lifespan

Thanks to the integrated baseplate the footing can be added easily, keeping your fence line upright even during strong winds or external pressure. This significantly reduces the risk of tipping and prolongs the life of your construction fences. It's a professional and reliable solution for both temporary fencing setups.
