Raise your temporary fencing to 3 metres for maximum security

Flexible solution for extra height

This extension piece allows you to raise standard 2-metre-high temporary fences to a height of 3 metres. It fits into the upright tube of an existing fence panel, after which a 1-metre-high fence top section can be mounted on top. Thanks to the clever design with the connector plate, the additional section locks firmly into place and is secured using standard couplers.

- Increases fence height to 3 metres
- Simple and quick to install
- Suitable for temporary fence setups

Extra security and protection

A taller fence line improves site security and reduces unauthorised access. That makes this extension piece ideal for locations where enhanced protection is required, such as busy construction sites or public events. Its flexible application enables you to upgrade existing fencing to the desired height without complex modifications or having to replace panels.
