Make your mobile fences stand out with red and white reflection

For temporary fences that need to be seen

In some situations, it is very important that your fence line is highly visible to pedestrians and road users. This red and white reflective strip is therefore the solution to make temporary fencing extra conspicuous. Thanks to the bright reflective colours, you increase the visibility of the fence line, even in the dark or in bad weather. This strip is therefore ideal for use at various locations, such as construction or road works, to increase safety and visibility.

- Can be mounted immediately
- Weather-resistant
- Increased visibility

Easy to attach with tie wraps

The strip has pre-drilled holes so that you can quickly and easily attach it to a mobile fence with tie wraps. Without additional tools or preparation. Within minutes, the strip is securely attached to the fence. Our standard temporary fences are 3.5 metres wide. The strip is about 1.6 metres wide, so the panel does not protrude at the sides of the fence. Make your construction site stand out and meet safety requirements with this practical and reflective strip.
