Space-saving storage rack for temporary fencing

Efficient vertical transport of temporary fences

The plastic Transport Rack-V is designed for the safe and compact transport of up to 28 Heras temporary fences. It features 28 openings, each holding the vertical tube of a fence. The opposite side of the fence rests on the ground and is secured using a tensioning strap or fence coupler. Thanks to its vertical positioning, this transport solution requires minimal space and helps extend the lifespan of the fencing.

- Space-saving and durable
- Holds 28 fences with vertical tubing
- Ideal for pre-galvanised fences

Practical solution on and off-site

This transport rack is not only useful for transport but also convenient during use on-site. It can be attached directly to the fence line, preventing it from lying around or needing to be removed during operations. As such, the frame contributes to both logistical efficiency and a well-organised, safe construction site. Heras also uses this rack in its own rental park.
