## For horizontal storage and transport of all types of temporary fencing

### Optimal solution for horizontal transport

This Horizontal Transport Rack is designed for the safe, horizontal storage and transport of temporary fences up to 2 metres in height. Supplied with four 1300 mm tubes, it ensures that fence panels remain neatly stacked during movement. The rack is suitable for all types of temporary fencing, though Heras particularly recommends it for panels with a central bar. Depending on the tube thickness, the rack can hold between 28 and 30 panels.

- Capacity for 28–30 fence panels
- Maximum load: 450 kg
- Stackable for efficient storage

### Compact, sturdy and user-friendly

The horizontal stacking ensures the panels remain securely in place, reducing the risk of damage and extending their lifespan. The rack is easy to manoeuvre both on-site and in storage areas. Multiple racks can be stacked safely, saving space and helping maintain an organised working environment.
