Efficient storage and transport of recycled footings

Practical solution for transporting and storing recycled footings

This transport rack from Heras Mobile has been developed to make it easy to stack recycled footings and subsequently move, transport or store them. The open construction allows the blocks to be loaded or unloaded on both sides of the rack. Thanks to the smart design, this process can be carried out quickly and efficiently.

- Practical to use
- Stable
- Space-saving

An indispensable tool for construction sites

This transport rack is suitable for intensive use. The solid frame without removable arms allows the rack to be used regularly. This means you can use the blocks at multiple project sites to create a stable fence line. Whether for transport between sites, temporary storage or preparation for installation, this transport rack is an indispensable tool.
