Ease of use via remote wireless control of a sliding gate or barrier.

Ease of use via remote wireless control of a sliding gate or barrier.

This handheld transmitter meets the standards of Heras gates and barriers. The remote wireless control of a temporary gate or barrier guarantees great ease of use. The hand transmitters have four push buttons, which means they work like a remote control. The system uses a very reliable coding principle (rolling code). The hand transmitters operate on the special security frequency of 433 MHz and their range (in an open field) is up to 25 metres. Barriers and sliding gates are supplied with a hand-held transmitter as standard at Heras.

- Ease of use
- Simple
- Safe
