Used as an emergency switch or to turn off the control signal

Prevent accidental opening of your sliding gate

The key can be used for different purposes. For example, it can be used as an emergency switch or to turn off the control signal. When used as an emergency switch, the sliding gate opens when the key is turned, the sliding gate then remains in the open position. This ensures an evacuation can be carried out quickly and safely. If you have an emergency switch, push button or detection loop, we recommend you turn the control off outside working hours with the key switch. It will then not be possible to throw a heavy object, such as a bicycle, over the gate so that it lands on the detection loop and opens the gate. It will also make it useless for intruders to climb over the gate in an attempt to use the emergency switch or push button to open the gate. The sliding gate will remain closed.
