Mobile Fencing & Security

Stand-Alone Access Control set

Specifications

Control of an electric door opener, automatic door, sliding gate or barrier.

Control of an electric door opener, automatic door, sliding gate or barrier.

Has a single input for a card reader with Wiegand-compatible output and a memory capacity for 10,000 cards. If the card is valid, an output in the form of a potential-free relay will switch. A programming step carried out on the reader can make the cards valid or invalid when they are held up to the reader. This can also be done via the built-in keyboard, if the card is lost for example.

- 1 potential-free relay
- No PC required
- Programming via keyboard
- 10,000 cards
- Door open time 1 – 254
