A smart, safe and space-saving construction set sliding gate

Efficient access without a swing area

With this mobile sliding gate for temporary fencing, you can easily create a stable, safe and accessible entry point on your construction site. The sliding mechanism smoothly guides a standard temporary fence along a rail, without the need for a swing radius. This makes it an ideal solution for locations with limited space.

- Full-width access without swing clearance
- Easy installation with standard fence panels
- Ideal as entry gate or emergency exit

Practical and budget-friendly solution

To build a mobile sliding gate, you will need the gate element, plus the following components which must be ordered separately: 2 steel base plates, 3 wheels and 3 couplers. That makes it an affordable and flexible alternative to permanent gates. You can choose to use a single panel for a 3.5-metre opening, or combine two for a 7-metre wide gate. The system opens and closes smoothly and can be used in both temporary and semi-permanent fence lines. For maximum security, we recommend using a robust gate lock instead of a standard padlock.
