Fast and secure folding gate for busy access points and limited spaces

Ideal for locations with limited space

The Wiki Speedgate is Heras Mobile's high-speed folding gate, specially designed for areas where there is no room for a sliding gate. Thanks to its compact build and smart design, the gate opens and closes extremely quickly. This makes it particularly suitable for high-traffic locations such as construction sites, distribution hubs and industrial premises.

- Compact design
- High opening speed
- Quick installation

Reliable, even under extreme conditions

The gate is delivered fully pre-assembled and features a unique hinge solution with a customised drive system. This combination guarantees smooth operation, even in low temperatures, snow or ice. Its robust design ensures maximum reliability, regardless of site conditions.

Optimised for safety and continuity

The Wiki Speedgate is equipped with a self-locking electromechanical drive system, magnetic lock and mechanical top catch. This ensures the gate always remains securely closed, even in the event of a power cut. Thanks to its high opening speed, traffic flow is optimised without compromising on safety.
